# Gallagher Enterprise Security Solutions

Delivering integrated security solutions globally.

---

*Gallagher is the only manufacturer worldwide to produce a platform which fully integrates:*

- *Access control*
- *Perimeter security*
- *Intruder alarms*
- *Global site management*
- *Compliance enforcement*

Gallagher is a global technology supplier of integrated access control and perimeter protection, encompassing both hardware and software systems, and professional services. Gallagher delivers electronic access control, intruder alarms management, perimeter security and compliance management through a single integration platform.

Gallagher's security solutions are in use with national and local government, military, commercial, industrial, healthcare, transportation and academic organizations in more than 100 countries.

## Access Control

The Gallagher security platform monitors and controls access on site via electronic card readers, RFIDs, biometrics and keypads.

- **24/7 workforce management** – automatic access decisions and tracking of who can go where and when on site
- **Access control management across multiple sites** – using only one platform
- **Compatible with IT systems** – the Gallagher system resides on your existing network, using minimal bandwidth and without interrupting normal IT communications
- **Immediate notification of alarms raised** – with optional SMS/email notification
- **Tailored door entry** – allowing extended access time to specific cardholders
- **Re-usable, customized cards** – minimizing time taken to gain access to site
- **Full visitor/contractor history** – providing detailed reports and enabling an effective evacuation in the event of an emergency
- **Elevator access** – readers can be installed in elevators enabling organizations to control access to certain levels
- **Scalable security** – integrated solutions using bio-metrics can be added requesting both identification and verification to gain entry. The option for duress fingers (allowing access but raising an alarm when a duress finger is presented) may be appropriate for a high security site
- **Readers** – with a reputation in the industry for their sleek, modern design the Gallagher reader range is monitored to ensure full functionality at all times. A range of security levels are available either requiring a card, card plus PIN or visual verification – known as Challenge
- **Automatic vehicle identification** – Integrating Nedap AVI with the Gallagher Command Centre ensures that a vehicle can only gain access or leave a secured area if accompanied by an authorized driver. The Gallagher solution allows gates to be activated at a greater distance than traditionally possible allowing for an uninterrupted flow of traffic onsite
- **Emergency management** – certainty and control of personnel locations on site minimizes the risk of accidents, site shutdowns and corporate liability
- **SMA (Software Maintenance Agreement)** – ensuring your site keeps pace with the latest technology and Microsoft® operating platform releases

Gallagher also provides a range of professional services that ensure you get the most from your system. These include but are not limited to: Customizations to Gallagher software to meet specific requirements; Integration – development of middleware to integrate two or more systems; and Identifying potential efficiency gains through the use of your security management system

## Perimeter Security

Gallagher's electric fence systems are effective and reliable perimeter solutions, configurable for any type and size of business.

- Actively deterring and detecting intruders - the networked perimeter fencing system consists of a grid of electrically pulsed, high tensile wires that can be constructed either inside a new or existing perimeter fence.
- Configured, controlled and monitored within the Gallagher Command Centre - allowing multiple sites to be monitored and managed from a central point.
- Integrated imaging systems - provide a visual and audible record of events either to be viewed as a live stream or to be relied upon as evidence if required. The Gallagher system can also be integrated with many brands of imaging systems (DVR, NVR, and CCTV).

## Intruder Alarms

Fully integrated intruder alarm management with the ability to channel all alarms through the Command Centre for appropriate action, removing the need for a separate intruder system.

## Compliance Management

Gallagher's security platform can be configured to enforce the business policy of each individual organisation.

- Ensure your employees are compliant with business policy - controlling access based upon individuals' competencies - e.g. training, licenses, clearances etc;
- Facilitate and monitor inductions, licenses, qualifications and training within the Gallagher system;
- Guarantee compliance with OH&S regulations automatically - via a pre-configured system ensuring automatic testing based on a range of parameters including: drug & alcohol testing and core knowledge tests;
- Fatigue and exposure management - protect the safety of your staff onsite with automated fatigue and exposure checks for those that need it most;
- Access expiries management - raises alerts for pending expiries of training, access, cards etc - for a proactive approach to access management;
- At the door execution to empower staff to self-comply with policy.

## Global Site Management

Gallagher's multi-server architecture allows the connection of multiple sites worldwide through a central Command Centre.

- **Multi-server functionality** supports peer-to-peer communications between multiple servers enabling Gallagher to operate effectively in a distributed environment, which may include multiple sites separated by large geographical distances.
- **Cross-site operational cover** - The Gallagher access system remains fully operational in the event of network failure and operators have the ability to view remote servers and provide cross-site support.
- Cardholders can use their **single card, biometrics, photo and credentials** across all sites worldwide.
- **The multi-server function** provides a comprehensive disaster recovery solution, temporarily allowing operational cover for the disaster affected site.
- **Evacuation reporting** is enhanced by multi-server as any server can keep an up-to-date status on the locations of all cardholders over the network.
- **Reduce telecommunication and monitoring expenses** through centralized access control.
- **Growing with you** - The Gallagher system allows the addition of new buildings, employees etc without redundant hardware or unreasonable costs.
- **Secure encryption technology** with equipment communicating at 256-bit, the Gallagher system has options for encrypting communications from controllers to peripheral equipment, securing data and preventing transmissions from being intercepted.
