VPASS

VISITORS MANAGEMENT

WELCOME TO VPASS ACCESS CONTROL

# VISITOR MANAGEMENT

Large and small estates provides reporting, mobile applications for residents, keypads and a cloud-connected hardware controller.

# What is VMS

We have estates using our mobile scanners, keypads, controllers, reporting or other technology.

## IDENTITY VERIFICATION

Track who is entering and exiting the estate. While many estates and corporates verify residents, residents are not your main security concern.

## DATA REPORTING

The back-end allows you to track events and visitors and allows for piece of mind.

## INTEGRATION

API's allow for integration with external Access Control systems to open gates or booms and allow for external reporting. A integration component also exists to allow for VMS to be integrated into your own already built mobile applications.

## GUARD APP & SOLUTIONS

The guard app, mobile handheld computers with built-in RFID and barcode scanners, passport and ID OCR scanner-hardware, connected gate controller hardware, keypads and more allows for turn-key Access Control and/or modular VMS solutions to be assembled based on client need and existing infrastructure.

## RESIDENT APP

Residents receive a estate or corporate branded app (iOS and Android) with features for communication, visitor pre-booking, defining regulars and more.

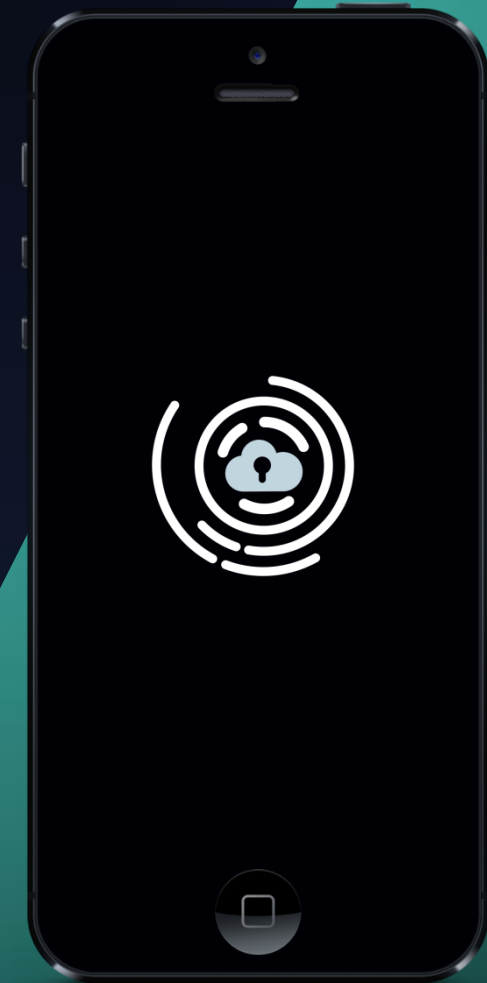

## PORTAL

Manage Access Points, reporting access, users and events from the online portal. Allow residents to pre-book visitors online from any internet connected device.

# Security is Key

In today's world security and access management is a necessity.

- Allow residents and employees (for corporate) to pre-book visitors on specific days via a branded mobile app or online. The visitor receives a pin via text message to ensure temporary access linking the visitor to the pre-booking record.
- Identify the visitor via Drivers License Card, Identity Document or Passport (hardware component, solution and country dependent)
- Record and Track who entered which gate/access point at what time and what day, as well as whom they were invited by.
- Allow non-invited visitors to arrive and allow guards to call the resident to be visited. The resident Pressing 9 during the call will allow access and grant the identified visitor (ID Card/Doc, Drivers License, Passport or other) access.
- Modular, configurable and scalable to suit both small and larger estates, corporates or corporate estates.

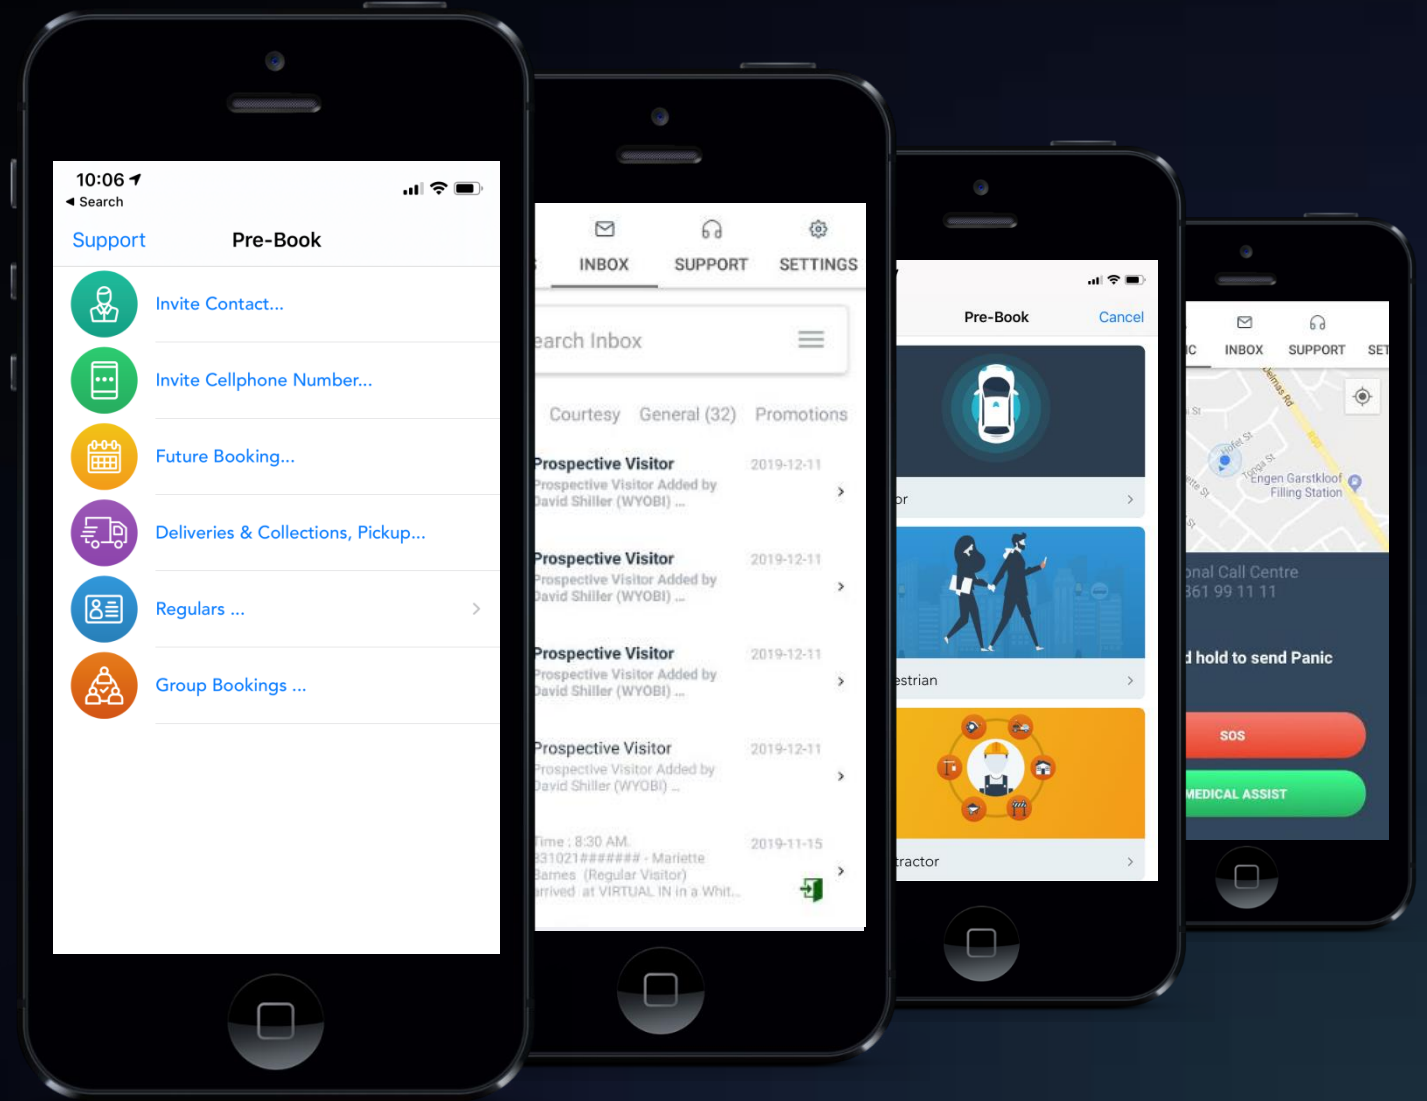

# Residents Mobile App

In today's world security and access management is a necessity.

A Resident App allows residents to manage their own visitors and regulars and estates to oversee, identify and block unwanted visitors. The app is highly configurable to suit every need.

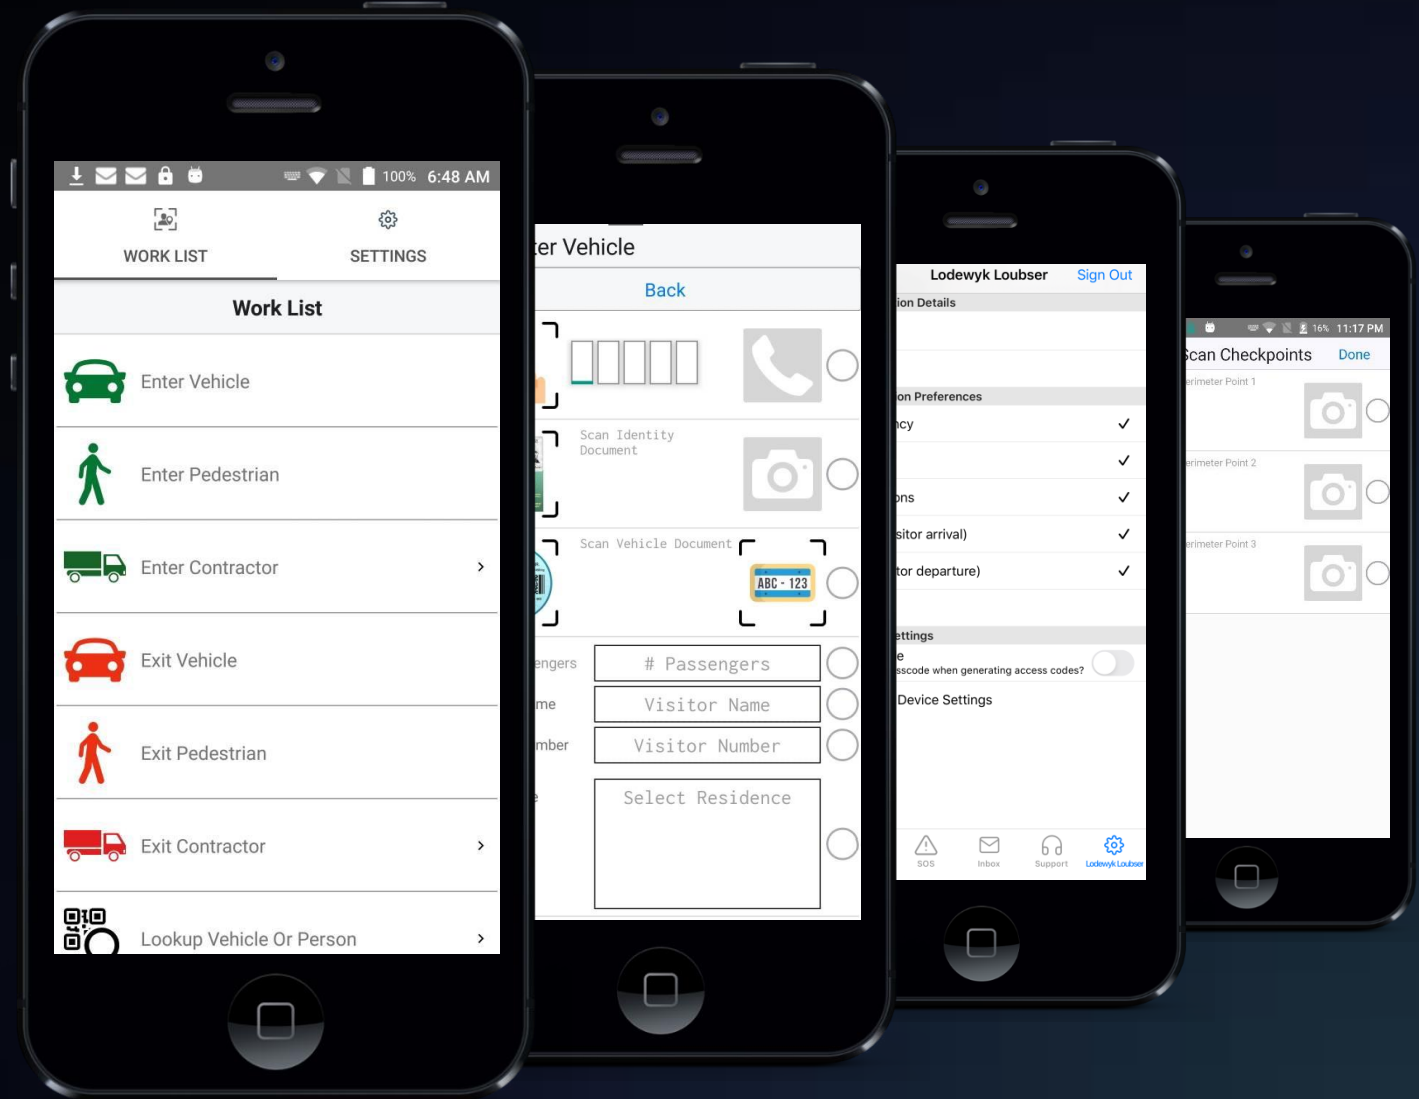

- Configurable
- Communication Tool (messaging/chat)
- Book ad-hoc and regular visitors
- Panic button or SOS response

# Guard Mobile App

Residents, staff or students

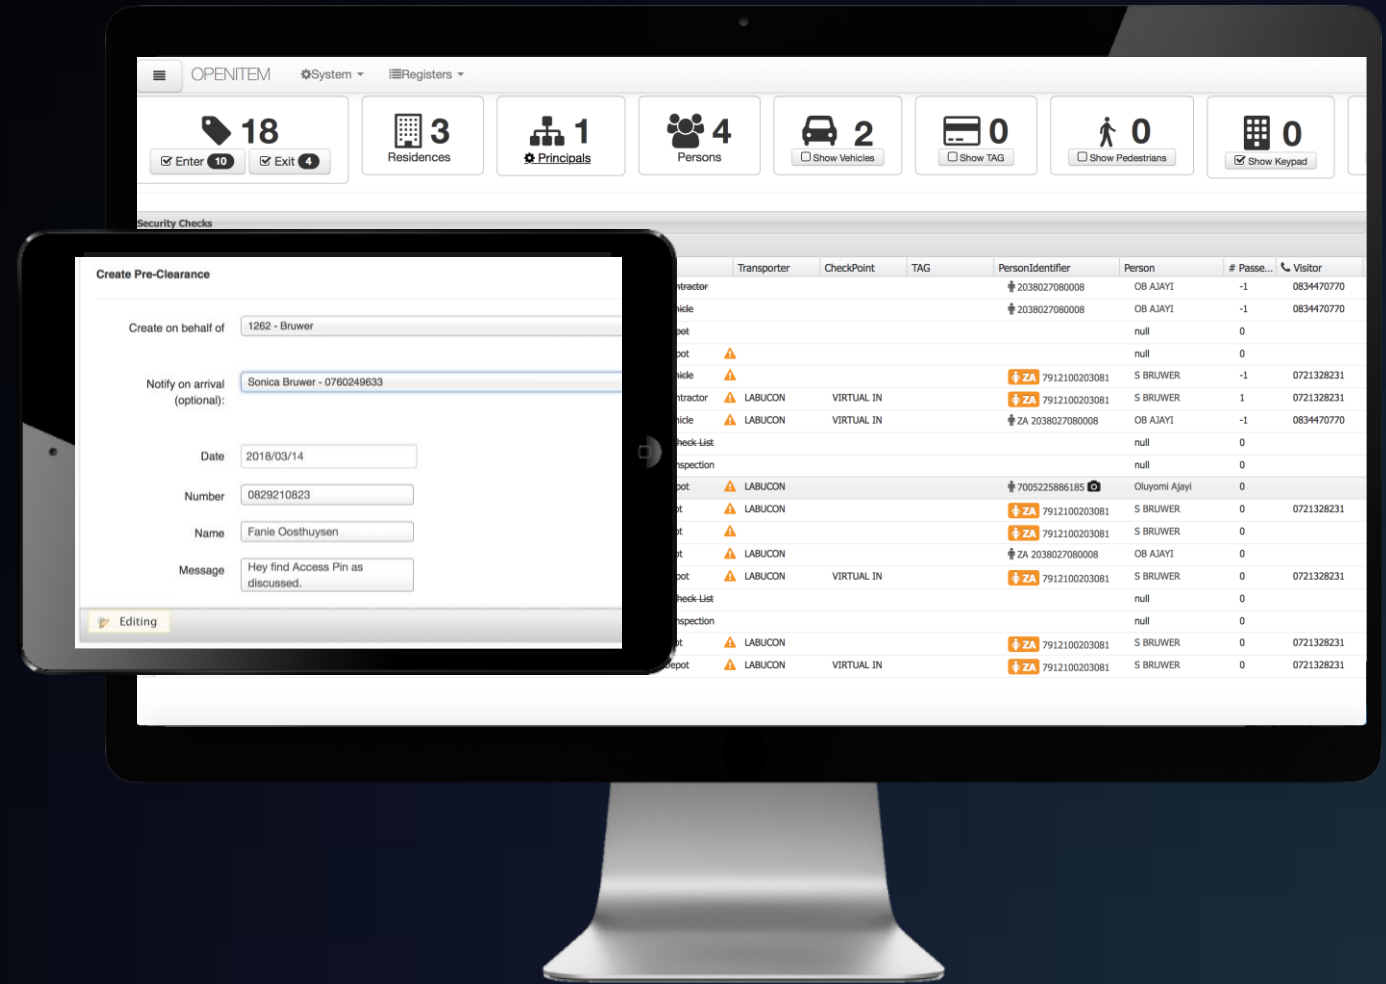

- Configurable backend and dashboard
- Identify and classify
- Pin entry access on device
- Ensure guard security rounds

# Dashboard

Reporting, Online pre-book, Resident management, bulk import, events and more

- Central Database Management
- Extensive two-way Member Communication
- Member Opinions Feedback
- General Information Sharing
- Upcoming Events Sharing
- Media Sharing
- Community Magazine and Newsletter Sharing
- Task & Case Management
- Online Document Sharing and Management
- General Administrative Matters

# Hardware Integration

Custom development and integration to suit access requirements

- Cloud Connected Gate
- Ruggedized Mobile Barcode/Tag/RFID and Fingerprint Scanners
- OCR Passport Scanners
- Controllers
- Electronic Keypads
